

AlpaTrade — Mag-7 strategy backtest summary

Generated 2026-07-20 10:24 UTC · basket: AAPL, MSFT, GOOGL, AMZN, META, TSLA, NVDA · starting capital \$10,000

Each cell is the **best grid-search variation** for that strategy over that look-back window, shown as **Return% / Sharpe / Trades**. Comparing across horizons is the anti-over-fit check: an edge that only appears on one window is likely fitted to it.

Performance across horizons

Strategy	1m	3m	6m	1y
buy_the_dip	+2.14% / 10.99 / 59	+4.95% / 9.07 / 170	+10.41% / 8.09 / 386	+18.31% / 8.22 / 613
momentum	+0.00% / 0.00 / 0	+0.00% / 0.00 / 0	+0.00% / 0.00 / 0	+0.00% / 0.00 / 0
vix	+0.00% / 0.00 / 0	+0.00% / 0.00 / 0	+0.00% / 0.00 / 0	+0.00% / 0.00 / 0

PnL (\$) by horizon

Strategy	1m	3m	6m	1y
buy_the_dip	\$214	\$495	\$1,041	\$1,831
momentum	\$0	\$0	\$0	\$0
vix	\$0	\$0	\$0	\$0

Calibration / over-fit read

- **buy_the_dip** — traded on 1m, 3m, 6m, 1y; positive on 4/4 horizons; Sharpe range 8.1–11.0. consistent across horizons — more trustworthy.
- **momentum** — produced **no trades** on any horizon (default grid didn't trigger on this basket); not comparable without parameter tuning.
- **vix** — produced **no trades** on any horizon (default grid didn't trigger on this basket); not comparable without parameter tuning.

Calibrated recommendation

On the **longest window that actually traded**, the best strategy is **buy_the_dip** over **1y**: +18.31% return, \$1,831 PnL, Sharpe 8.22, 613 trades, 0.37% max drawdown.

Winning parameters: {"dip_threshold": 0.07, "take_profit": 0.01, "hold_days": 1, "stop_loss": 0.005, "position_size": 0.1, "symbols": ["AAPL", "MSFT", "GOOGL", "AMZN", "META", "TSLA", "NVDA"]}

Caveats

- **Best-of-grid is optimistic.** Each cell picks the best of ~18 variations on that exact window; a very high Sharpe on a short window usually means over-fit, not edge. Longer windows are more trustworthy. For a true test, run walk-forward (train on one window, test on the next).
- Momentum / VIX may need parameter tuning to trade on this basket; `box_wedge` isn't wired into the grid-search backtester.
- Hypothetical results; not financial advice. Past performance does not predict future returns.

Storage & reproduce

- Every grid variation is persisted to the DB: `alpatrade.runs` (`mode=backtest`), `alpatrade.backtest_summaries`, `alpatrade.trades` (`trade_type=backtest`).
- Reproduce: `python scripts/multi_horizon_report.py` (or `scripts/strategy_backtest_compare.py <lookback>` for a single window).
